

Always OnGuard™

Total Security Knowledge Management Solution™

All you need to know about Electronic Security for Healthcare Facilities

Lenel OnGuard offers the most robust security solution to meet the changing needs of hospitals and medical centers today and tomorrow.

Lenel understands that healthcare facilities are as concerned with protecting access to health information as they are with protecting patients, employees and physical property. OnGuard offers the industry's most comprehensive security solution to ensure a safe and secure healthcare environment, while also assisting in the effort to comply with privacy regulations. Lenel is dedicated to creating solutions that meet customers' individual security needs, and to providing first-class support to our customers worldwide. OnGuard is available in major world languages, including English, Spanish, French, German, Chinese, Arabic, Korean, Hebrew, Russian, Swedish, Italian and Czech. OnGuard is supported by technical offices and partners in more than 50 countries.

Lenel® OnGuard®

Access Control Solutions

- + **OnGuard Extended Enterprise™**
Advanced, distributed multi-regional, integrated security management system (U.S. Pat. 6,233,588)
- + **OnGuard Enterprise™**
Advanced, single-region, integrated security management system (U.S. Pat. 6,738,772)
- + **OnGuard Mobile Enterprise™**
Wireless security management system

Identity Management Solutions

- + **OnGuard ID CredentialCenter™**
ID credential, PKI, smart card and biometrics management system

Video Management Solutions

- + **OnGuard VideoManager™**
Seamlessly integrated, IP-based digital video management system
- + **OnGuard GO!™**
Access control, ID management, and digital video recording, integrated on a single unit

Open Architecture Integration Services

- + **OnGuard OpenIT™**
IT integration service
- + **OnGuard DataExchange™**
Advanced data import/export service
- + **OnGuard SNMP™**
Network management integration service
- + **OnGuard OPC™**
Process control & building automation integration service
- + **OnGuard Visitor™**
Visitor management system

LENEL®

Always OnGuard™

Only Lenel offers comprehensive solutions to provide maximum facility security and continuous patient, employee & visitor management and identification!

Third Party Integration Capabilities

OnGuard's advanced integration capabilities facilitate bidirectional communication with third party databases, such as those in visitor management, parking, patient records, pharmacy, catering, human resources and finance systems. OnGuard can also integrate with a number of supported fire alarm, intercom and personal safety/duress systems. If a patient, visitor or employee leaves the medical institution, the information is transferred from the appropriate database to OnGuard, which automatically removes all access rights for the cardholder and downloads the required information to the access controllers.* Most importantly, this integration is achieved through software, not hardware, and is written to available IT standards, to maximize reliability and ensure forward migration compatibility for years of investment protection.

Securing Health Information

Lenel's Total Security Knowledge Management Solution™ provides the necessary protection to ensure that patient health information is secure. OnGuard OpenIT™ enables endless integration possibilities to add an extra level of security to electronic data. For instance, creating an OnGuard cardholder will automatically create a Microsoft Windows logon account, which can be securely accessed only through use of a smart card and PIN. In addition, when a person exits the building by swiping their ID credential, their LDAP account will automatically become disabled, preventing unauthorized use.* Lenel's integrated security solutions help healthcare organizations take the necessary steps towards HIPAA compliance.

Digital Video Solutions

OnGuard VideoManager™ offers the industry's best and most comprehensive video solution, delivering advanced data mining and investigative capabilities. Available either as a standalone system or seamlessly integrated with the OnGuard portfolio, its capabilities are numerous.

Smart Card Management

Secure credentials can easily be created, managed and authenticated with OnGuard ID CredentialCenter™. This unique product offers seamless integration of biometrics and smart cards, plus management of visitors, patients, medical students and employees.* Data on a single card can be updated regularly from a single point and used across multiple systems, including cashless vending, food service, time and attendance, parking and more!

Visitor Management

OnGuard Visitor™ is a dependable and cost-effective visitor management application, ideal for use where visitor traffic is high. OnGuard system administrators can track a visitor's scheduled arrival and departure times against their actual in and out times. If a visitor has been assigned access rights to certain areas, system operators can tightly track the visitor's movement throughout the facility using the OnGuard Alarm Monitoring application module. OnGuard Visitor can be integrated with the OnGuard Video application module, allowing system administrators to link digital video clips to visitor activity.*

* Product Features, Benefits and Advantages that focuses on helping the care provider comply with the United States federal government's Health Insurance Portability and Accountability Act of 1996; and other privacy rules around the world.

Area Access Management

OnGuard Area Access Manager™ enables authorized personnel to control cardholder access to specific physical areas. This valuable solution has endless applications for hospitals, laboratories and medical facilities, which need to secure and monitor highly sensitive areas.* OnGuard Area Access Manager facilitates the administration of patients, employees, medical students and visitors within the facility, and ensures a more secure environment. Time zones within the system can be configured to require additional layers of security for those qualified to access facilities during off-hours. This eliminates dependence on security personnel, and adds a greater level of protection during more vulnerable times.

Guard Tour

Guard Tour allows for one or more card readers or alarm inputs to be checked during routine tours to verify that predefined guard routes are completed. Guards use their credentials at card readers or trigger inputs in a sequential order that follows their watch path. Each tour communicates events to Alarm Monitoring, allowing operators to know if checkpoints are reached on time, early, overdue, or late. Tours can be linked to live video in a 'sliding window' format featuring multiple camera views spanning from checkpoints already hit, the current checkpoint, and anticipated checkpoints. Reports can be generated for investigative purposes.

Intrusion and Fire Alarm Integration

Enhanced intrusion detection and fire alarm integration have proven effective in centralizing alarm monitoring and response. Lenel's OnGuard Intrusion™ allows customers to monitor intrusion detection devices and view intrusion alarms inside OnGuard Central Station Receiver, which acts as a central communication point for all alarm panels connected to it. The system can be configured such that when an alarm occurs, an audio alarm is triggered, a camera starts recording digital video at the alarm location, and email and paging messages are sent to emergency response personnel. Hospitals, medical facilities and laboratories can benefit from these integrated reporting and investigation tools to ensure the most appropriate response to an event.

A Sample of Our System Installations

- Children's Medical Center, Dallas, USA
- Fairfax Medical Labs, USA
- Hamilton Hospital, Bermuda
- Hawkesbury General Hospital, Canada
- Hershey Medical Center, USA
- Hospital Monseñor Sanabria, Costa Rica
