Infant Protection

How Secure is Your HEALTHCARE Facility?

Ahearn & Soper Inc. has the experience and expertise to offer security solutions for any kind of Hospital, Extended Care or Psychiatric facility

Help Staff Focus on the Tasks at Hand ...The threat of violence that exists in today's work environment is enough to distract your most dedicated and well-meaning staff members. Upon closer examination you're likely to find that this pervasive concern not only affects productivity and job performance, it can also cut short the careers of highly-qualified personnel. Now with the **Help Alert® Wireless Staff Duress Solution**, you can provide staff members with greater peace of mind, which in turn helps them concentrate on the job they were hired to do.

Infant protection in hospitals has become a high priority for any well-run hospital, and providing high quality infant protection is easier and more affordable than ever. The **Accutech Cuddles Infant Protection System** is an (RFID) electronic security system designed to maintain the safety of infants in obstetric and pediatric departments. A small, tamper-proof infant tag is placed on the baby immediately after birth. If there is an unauthorized movement of the baby toward any exit door, the **Cuddles System will automatically warn hospital staff and automatically puts all doors on look-down!** Easy-to-use hardware and software work seamlessly, enabling nurses to spend less time managing a "system" and more time focusing on what matters most – **looking after the babies in their care.**

At Ahearn & Soper, “We are ‘Serious about Security!’”

Regardless of the type of system you need or the size of your installation, Ahearn & Soper Inc. specializes in IP Network Cameras and installation. We can build a solution customized to your business needs.

You can protect your facilities and your employees with a state-of-the-art surveillance system. We use Lenel Network Video Recorders and software to provide managed recording and viewing functions. IP or Network Cameras provide a host of features and capabilities that are simply not available on analog cameras. Bi-directional Audio, high quality images of moving objects are just some of these advanced features.

Network-based Video Surveillance is more flexible and less expensive to install than older Analog Technology; Expanding network systems is simpler and more cost effective.

We have successfully installed camera systems in Airports, Hospitals, Schools and Colleges as well as Municipal facilities.
